☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.  
☐ filed together with the international application in computer readable form.  
☐ furnished subsequently to this Authority in written form.  
☐ furnished subsequently to this Authority in computer readable form.  
☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.  
☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

- ☐ the description, pages:

- ☐ the entire international application,
  - ☒ claims Nos. 35
- because:
- ☐ the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (specify):

  - ☒ the claims, or said claims Nos. 35 are so inadequately supported by the description that no meaningful opinion could be formed.
  - ☐ no international search report has been established for the said claims Nos.
2. A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide and/or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:
- ☐ the written form has not been furnished or does not comply with the Standard.
  - ☐ the computer readable form has not been furnished or does not comply with the Standard.

International application No. PCT/GB 03/01192

1. D1(WO-A-0035746) and D2(US-A-5542365) both disclose a vessel provided with a double skin and impact energy absorbing means either including the outer skin or between the outer and inner skins. As such, this is to be considered as situated between the hull and the passenger area.

Therefore the only difference between the object of independent claim 1 and the disclosure in either D1 or D2 is to be considered the planning hull. It is submitted that the idea of designing an at least partially impact energy absorbing hull does not depend on the type of hull or on the speed at which it is driven. Moreover, since there is no practical indication in claim 1 as to how the impact energy absorbing means are to be designed, it seems obvious that the skilled one has to act out of his own general knowledge and also to look at known hull designs, and indeed the skilled person will find such suggestion among others in D1 and D2.

It is therefore submitted that the object of claim 1 lacks inventive step.

2. The appended claims 2 - 34 are concerned with details of design known per se in the art or obvious to the skilled one, such that they do not seem to add any inventive subject-matter to that of independent claim 1.
